PROFESSIONAL SUMMARY

Results-driven software engineering student specializing in Cybersecurity and Digital Forensics at Benha University's Faculty of Computers and Artificial Intelligence. Skilled in Flutter, Python, C++, Dart, and JavaScript, with strong expertise in REST API integration, JSON/HTTP protocols, OOP, SQLite, and software architecture. Builds responsive, production-ready mobile and desktop applications following clean code and secure coding principles. Highly proficient in AI-assisted development using ChatGPT, Claude, Cursor AI, GitHub Copilot, and Gemini CLI to accelerate workflows, enhance debugging, generate documentation, and support rapid prototyping. Experienced in cybersecurity and digital forensics including network fundamentals, malicious URL detection, and image forgery detection.

EDUCATION

Benha University — Faculty of Computers and Artificial Intelligence | Bachelor of Science (B.Sc.) in Cybersecurity & Digital Forensics (2027)

TECHNICAL SKILLS

Languages: Python, C++, Dart, JavaScript, HTML, CSS

Frameworks & Mobile: Flutter (Mobile & Desktop Applications, Responsive Design, Cross-Platform Development)

Software Engineering & Development: REST APIs, API Integration, JSON, HTTP, OOP, Software Architecture, Clean Code, Secure Coding, Debugging, Git, GitHub

AI & Productivity: AI-Assisted Software Development, Prompt Engineering, Hugging Face APIs, GitHub Copilot, Cursor AI, ChatGPT, Claude, Gemini CLI

Cybersecurity & Networks: Digital Forensics, Network Fundamentals, Computer Networks, Malicious URL Detection, Image Forgery Detection, Password Security

Databases & Tools: SQLite | VS Code, Visual Studio, Android Studio

CERTIFICATIONS

- Cisco CCNA: Introduction to Networks — Dec 2024
- Cisco CCNA: Switching, Routing & Wireless Essentials — Dec 2024
- Huawei HCIA-Datcom V1.0 — Sep 2024
- Huawei HCIA-Datcom Learning Course — Jul – Sep 2024
- Cybertalents Linux Practitioner (Online)
- Database Fundamentals — Jul 2022
- Learn HTML & CSS | Building Web Applications using PHP & MySQL — Jul 2022
- Build a Full Website using WordPress | WordPress: Free Hosting & Sub-domain — Sep 2022

PROJECTS

Security Center | Flutter, Dart, REST APIs | Mobile Application

Cybersecurity-focused mobile app delivering essential security tools with a responsive dark-mode UI.

- Engineered a Password Generator, Strength Checker, Malicious URL Detection engine (REST API + JSON/HTTP), and a Security Score dashboard with personalized recommendations.

AI Image Forgery Detection | Flutter, Hugging Face APIs, AI | Graduation Project

AI-powered mobile application detecting manipulated digital images using machine learning via Hugging Face API integration.

- Implemented an image upload pipeline, automated forgery analysis, and result visualization to support digital forensics workflows.

AI Debt Management System | Python, SQLite | Desktop Application — GitHub

Python desktop application for grocery stores to manage customers, debts, installments, payment history, and reporting.

- Built a local SQLite database layer with professional UI, advanced search, and reporting; published clean, well-structured code on GitHub.

StudyMate AI | Flutter, AI APIs | Mobile Application

AI-driven educational assistant with PDF summarization, AI-generated MCQs, and an AI Study Assistant for student productivity.
